MGNREGS is the Lifeline for Hilly People

- 1. Connectivity Problem: Due to landslide and steep terrain, road connectivity is a major issue and its the MGNREGS which gives them all these types of road network.**
- 2. People in general and students in particular suffers a lot while crossing the rivulet and flash flood during the rainy season when rain water flows above danger mark. Now the MGNREGS gives the people a new hope by giving them foot bridges at their door step and even guaranteed 100 days of employment to MGNREGA job card holders.**
- 3. Due to the to steep topography of this Block, it is very difficult to dump the material component of any durable asset at a particular site. To construct any durable asset in such a tough terrain is really a big challenge for MGNREGS team.**
- 4. In hilly areas, the rain water is of runoff nature and to conserve this water MGNREGS gives us the opportunity for constructing the water conservation assets i.e Harvesting Tanks, Ponds, Check Dams etc.**
- 5. People in snow bound area suffer a lot during winters and its only MGNREGS which give them employment .**
